

## Which oil and petrol should I use for my lawnmower?

### Oil

The oil we sell under article no. 7201 has been specially developed to withstand the greater heat generated in an air-cooled, four-stroke lawnmower engine. You should therefore use an SAE 30 "lawnmower oil" and not the same type of oil you have in your car.

### Petrol

All our engines can run on unleaded 95 octane petrol or green petrol. Certain older models of two-stroke type should be run on a mixture of petrol and oil. Check your engine first if you are uncertain.
