

Why should I use original spare parts on my machine?

Klippo expends a great deal of effort to ensure that the machines work as impeccably as possible for a long time. We want this to be possible after you have serviced your machine too. All the parts of the machine have their own special features and functions which might not be evident at first sight, but only when you study them in detail. In addition, all our spare parts come from the same quality family as the parts that come with the machine when it is new.

We make no guarantees if you do not use original spare parts. Moreover, the machine will no longer have CE approval and we can accept no liability for the product.

Always ask for Klippo Original when you buy wearing parts and spare parts or when you have someone service your machine.
